2 INTRODUCTION

Kamstrup MULTICAL® 403, MULITCAL® 603 and MULITCAL® 803 have an integrated fully programmable data logger. The meters can be configured to various logger profiles. These profiles define the depth of loggers, the interval of the minute loggers and which registers should be included in the loggers. The logger profile is identified by the meters RR-code.

The configuration of a M-Bus module is described by the XX-YY-ZZZ code.

XX: Module type - the physical hardware

YY: System configuration – for wireless M-Bus, the radio parameters

ZZZ: Datagram – the data registers

M-Bus and wireless M-Bus modules for MULTICAL® 403, MULITCAL® 603 and MULITCAL® 803 are configurable, whereby they can be configured to send out different datagrams. A datagram is defining, which registers a specific module is configured to send out. Furthermore, transmission interval and transmission power for wireless M-Bus modules can be configured. The modules configuration is identified by the modules YY- and ZZZ-code.

This document provides an overview of both the available logger profiles for MULTICAL® 403, MULITCAL® 603 and MULITCAL® 803 and the available configurations for the wired and wireless M-Bus modules.

3 MODULE DATAGRAM EXPLANATION

All of our M-Bus modules wired or wireless are versatile communication modules, which can be configured to send out different datagrams. A datagram is a collection of registers a module is configured to send out. A datagram is also called a data package or a data telegram.

Not all registers are available in all meters. E.g. will cooling register E3 only be available in a meter configured as a cooling or combined heat/cooling. It will not be available in a heat meter.

For reading out Target registers, the wanted registers must be defined in the RR-configuration (logger content).

If datagrams intended for MULTICAL® 603 and 803 are used in MULTICAL® 403 some registers will not be present.

Disclaimer: All data registers in the below mentioned datagrams may not be available in the reading software.
Please contact Kamstrup A/S if any questions regarding the availability of data registers occur.

All datagrams and their content are shown in tables.

No.	Register Id	Register name	Register Origin	St. no.	Data type	Notes	H	C	H/C	V
1	60	Heat energy E1					X		X	
2	63	Cooling energy E3						X		
3	63	Cooling energy E3				HCC			X	

The table columns are defined as:

No.: Just indicates a number of the register in the configuration.

Register ID: A numeric identifier for the register.

Register name: Is a description of the register content.

Register origin: Which source the register is read from:

- **Meter** **shown as a blank field, as this is default origin.**
- Module
- Year Log Yearly Target value
- Month Log Monthly Target value
- Day Log Daily Target value

St. no: An M-Bus description to indicate Storage number.

- **0** **shown as blank field, as this is actual value from meter**
- 1 Logger 1
- 2 Logger 2
- n Logger n

Data type: Indicates data type:

- Int1 1 byte integer value
- Int2 2 byte integer value

- Int4	**shown as blank field, as this is mostly used.**
- BCD2	2 digit BCD coded value
- BCD4	4 digit BCD coded value
- BCD6	6 digit BCD coded value
- BCD8	8 digit BCD coded value

Notes: A note indicates that some action has to be taken.

- HCC	Heat/Cooling Coding
- OMS	Coded according to OMS
- MSC	Manufactory Specific Coding
- 402	Legacy coding for MC402
- FDB	Fixed Data Block

H: If marked with X, the register is included in a Heat meter

C: If marked with X, the register is included in a Cooling meter

H/C: If marked with X, the register is included in a combined Heat/Cooling meter

V: If marked with X, the register is included in a Volume meter

4 WIRED M-BUS DATAGRAMS

Configuration of Wired M-Bus datagrams follows this method.

This table only shows a small part of the available datagrams, just to indicate how the Datagram naming and ordering are made.

See the table of content, for all included wired datagrams, or look through the following pages.

5 WIRED M-BUS DATAGRAMS FOR MULTICAL® 403, MULTICAL® 603 AND MULTICAL® 803

The following Wired M-Bus Datagrams are applicable for all wired M-Bus modules used in both MULTICAL® 403, MULTICAL® 603 and MULTICAL® 803.
The datagrams are sorted by where they are used, and then by their ZZZ code.

Similar to M-Bus modules 402020/670020/6707.
Not to be used where display is in MWh or GJ and has 0 or 1 decimal resolution.
Configuration does not support GCal.
Legacy module to be used in old Kamstrup systems or in 3rd party systems.
Up front test strongly recommended!

12 METER LOGGER PROFILES

Below a table shows each available logger profile, including a small description of each logger profile. For details please see the subsequent part of this paragraph which describes each logger profile in detail.

Once a new logger profile is created, it can be made available for both MULTICAL® 403, 603 and 803. However, a specific logger profile will not be identical on the meters, in terms of…

1. …available registers, because MUTLICAL® 403 and 603 supports only a subset of registers of that available in MULTICAL® 803.
2. …logger depth, as this varies in the three different meter series and therefore in some cases the logger depth will be extended in e.g. MULTICAL® 603 compared to MULTICAL® 403.
3. …register for date, time, Info code, hour and error hour will always be present in a logger profile

Name	Description	RR
Standard	Our standard profile which is based on the MC602 logger profile. **NB:** Without time averaged temperatures.	10
Current values	The standard profile with the addition of current (actual) values in a 15 min. logger	11
Ludwig	The standard profile with an extended logger depth for the monthly logger (72 months). Furthermore the registers A1/A2, COP, time averaged temperatures and time averaged analog inputs are added. Lastly the energy registers are added to the daily logger.	12
Madrid	The standard profile with the addition of a 15 min. logger, which contains all of the registers concerning actual values.	13
Peter	The standard profile with an extended logger depth for the hourly logger (1600 hours). Furthermore the registers dE, cE, dV and cV are added.	14
Diagnostic 1	A profile for diagnostic purposes with 1 min. logger containing actual t1, actual t2 and actual flow for V1.	15
Diagnostic 1	A profile for diagnostic purposes with 1 min. logger containing actual t1, actual t2, actual flow for V1 and the analog inputs P1 actual and P2 actual.	16
Kiev	The standard profile with an extended logger depth for the hourly logger (1600 hours). Furthermore the registers dE, cE, dV, cV and COP year / month are added.	17
Information sensitive	A profile with minimum amount of registers – only E1, E3, V1 and INFO	18
Norton	A profile with 1 min logs of actual values + COP	19
Athens	A standard logger profile with addition of actual values, and a twice as large hourly logger as standard logger profile (RR10).	20
Noe	A logger profile with reduced registers. Year depth is reduced to 16. Month, day and hourly log dept is increased to 72, 2190 and 2160	21

Munich	A logger profiles with extended day, month and hour log. Also 15 minute log is available	22
Tartu	A logger profile with maximum 15 min loggers. But with reduced year and monthly (5 and 12) logs. Day and hourly log is completely removed.	23
Wetzlar	A logger with 10 minutes logs of some actual values	24
Doetinchem	The standard profile with temperatures as minute logs and Furthermore the registers dE, cE, dV and cV are added.	25
LinkIQ	A LinkIQ logger profile, special made for the LinkIQ module	50
KM RF	A Kamstrup radio (KM RF) logger profile specially made for our legacy radio modules; HC-003-50, HC-003-51 and HC-003-84,HC-003-85.	90

92	P2 actual	Actual value of analog input P2		✓	✓

**The sign of the value in the "Power actual" register identifies if the power is calculated of E1 or E3. For heat the "Power actual" will be a positive value and for cooling it will be a negative value. For a heat/cooling meter the sign of the value in the "Power actual" register will change as the differential temperature changes, e.g. if the meter converts from calculating heat energy (E1) to calculating cooling energy (E3).*
